

Press release

Turning and positioning aid MobiTurn® now available with aid number

Raesfeld, 18th July 2023

Funke Medical is expanding its product range with the MobiTurn® turning and positioning aid, which can be used both in inpatient and home care. The new product is an ideal aid for professional and back-friendly positioning of immobile patients. It is now available in medical stores and is listed in the list of medical aids of the GKV-Spitzenverband with the aid number 22.29.01.2077, so that the costs can be covered by the health insurance companies if there is a corresponding indication and a doctor's prescription.

In addition to products for decubitus prophylaxis and therapy, Funke Medical GmbH's product range also includes seating and mobility aids, as well as ergonomic seating systems for dentistry and orthopaedics. The essential basis of Funke Medical's high-quality foam-based product solutions is its long-standing and well-founded knowledge of medical lying, seating and positioning systems, which flows into the continuous development of new products. The MobiTurn® turning and positioning aid is the latest innovation of Funke Medical GmbH. The MobiTurn® facilitates turning and positioning of patients with severe physical limitations.

Intelligent aid MobiTurn® enables back-friendly care

Although back problems have become a common disease, nurses in particular suffer from it due to their workload. According to the Employer's Liability Insurance for Health and Welfare Services, two out of three nurses suffer from back pain, which leads to an average of 21 days of absence from work per year. Tools such as the MobiTurn® help to prevent such problems and at the same time make care as comfortable as possible for the patients. The ergonomic shape of the turning and positioning aid helps to bring immobile persons safely and painlessly in bed from the supine to the side position. This makes positioning easier for the caregiver or caring family members and enables back-friendly and effortless work.

User-friendly product features flank the function of the MobiTurn®: the entire product is autoclavable and the removeable cover is washable, wipe disinfectant resistant and suitable for disinfection with chlorine. Its bi-elastic cover also helps to further minimise shear forces during use.

Funke Medical GmbH is one of the leading German manufacturers of decubitus therapy systems and seat elements for dental medicine in Germany. In November 2021, Harald Quandt Industriebeteiligungen GmbH acquired a majority stake in Funke Medical GmbH. Founded in 1988 in Raesfeld, the medium-sized company manufactures and supplies its customers in Germany and abroad from there. Free digital services complete the product range, e.g. the Funke Medical online academy for further education in healthcare sector and a web-based tool to receive the latest user manuals in all languages.
